M Methodology

Documents are fetched and normalized, then extracted against a closed 17-category clause taxonomy. Every clause must carry a verbatim quote from the source document — **no quote, no clause**. Off-taxonomy output is dropped, not passed through.

Risk scoring and the pass / flag / block verdict are **deterministic**: no language model participates in scoring or adjudication. The same document produces the same score on every run.

This report is an automated risk assessment, not legal advice. Verify any material finding against the quoted source text before acting on it.
